

ENERGY 588: Introduction to Solar PV Project Development Syllabus

Course Logistics

Class Time:	Wednesday, 3:20 PM –5:50 PM
Location:	Grainger Hall, Room 2102 Zoom/Remote for selected classes only
Instructor:	Scott Starr (scott.starr@duke.edu)
Office Hours:	Weekly before class, 2-3pm EST - Nicholas GH 1100
Teaching Assistant:	Henry Drewyer (henry.drewyer@duke.edu)
Office Hours:	Upon request (please email Henry)

Caveat:

This syllabus is a work-in-process guide and subject to change at professor's or assistant's discretion; readings, in particular, may be added and amended regularly.

Course Overview

Historically, while most of the electricity in the U.S. was generated using fossil-based fuels, there is growing supply and demand for power from renewable sources. Market factors and societal pressures are pushing electric utilities, corporations, and individuals to consider, and in many cases, embrace renewable power generation throughout the U.S. Increased regulatory costs threaten the coal industry, while public awareness of climate change drives corporations and municipalities to demand clean electricity. Meanwhile the installed cost of solar power has plummeted over the last ten years. In this course, we will explore these drivers of change while examining how non-residential solar energy projects are developed, financed and built. The intent is to provide a practical introduction to the process of developing non-residential solar projects in the U.S. by examining the major players and steps in a complex process. Students will learn that professionals with expertise in law, engineering, real estate, public policy, regulation, finance, environmental consulting, and construction must work together over a period of years to get a solar generation facility de-risked and built.

The class will cover project siting, how site control is established, and how land use permitting can affect timelines and budgets. We will explore how utilities oversee the interconnection study process, and why uncertainties related to this can make project development difficult. Students will learn about the necessary real estate due diligence steps required to satisfy investors, including title, environmental and cultural resource assessments. We will touch on how states regulate the construction of power generation facilities, and we will explore the financing mechanisms commonly used to provide the capital required to construct a facility. Students will learn the roles of the major stakeholders involved with the development process, with a focus on the “Developer.”

Learning Objectives

This course will provide a foundation of knowledge and a set of tools useful for students interested in solar development, corporate sustainability or the energy industry at large. At the end of the class, students will be able to:

- Understand how public policy affects non-residential solar development, including key aspects of the Inflation Reduction Act (IRA) and state level solar programs and goals
- Define various non-residential solar market segments including utility-scale, community solar, and commercial and industrial
- Define the role of developer, EPC (Engineering, Procurement, Construction) provider, lender, and tax equity investor
- Apply the tools used in siting and infrastructure evaluation
- Describe the major steps in an interconnection process
- Describe key steps in real estate due diligence
- Describe the critical elements of legal contracts including Power Purchase Agreements, Interconnection Agreements, and EPC agreements
- Describe the commonly used project financing structures, and how solar system value is split amongst stakeholders
- Build a basic financial model to calculate project IRR

Course Requirements and Grading

This course is designed such that students will have a deliverable prior to every class, either in the form of an assignment or a reading summary.

Assignments (70%)

The bulk of the grading from this course will come from four assignments that will be done in teams. Assignments will be released one week prior to the due date and are due by 11:59 PM on the given date:

- Assignment #1: Site, Land, and Production Analysis | 15%
- Assignment #2: Interconnection and Permitting Analysis | 15%
- Assignment #3: PPA and Financial Analysis | 15%
- Final Presentation | 25%

All team members will receive the same score on the assignment. However, to ensure balanced contribution, I reserve the right to adjust individual grades based on level of contribution, which will be assessed via a peer feedback survey due prior to the last class of the semester.

Reading Summaries (15%)

Reading summaries are due before specific lectures, including: 2, 3, 4, 5, 8 and 11. These summaries are to be completed individually and consist of 300-word write-ups in responses to questions provided on 2-5 brief readings. These assignments will be available one week prior to their due date on Sakai and may be discussed at the beginning of class/

Reading summaries will be scored along the following guidelines:

- 2 points (max): summary answers all provided questions thoroughly and thoughtfully
- 1 point: summary does not address all provided questions and/or misses the point of the questions
- 0 points: reading summary not turned in or turned in late

Attendance & Participation (15%)

With only one class session per week, attendance is critical for learning the ins and outs of renewable project development. The more participation and discussion we have as a group, the better this class will be. This portion of your grade will be based on your attendance and your participation throughout the class.

Late Policy

Assignments must be uploaded to Sakai by the posted due date. Assignments handed in after the posted deadline will incur a 25 percent penalty for each 24-hour period they are late. Assignments submitted more than 3 days after the posted due date and time will receive a grade of zero.

Reading summaries turned in after the deadline will be given zero credit.

Duke Community Standard:

Duke University is a community dedicated to scholarship, leadership, and service and to the principles of honesty, fairness, respect, and accountability. Citizens of this community commit to reflect upon and uphold these principles in all academic and nonacademic endeavors, and to protect and promote a culture of integrity. **The Pledge:** Students affirm their commitment to uphold the values of the Duke University community by signing a pledge that states: **To uphold the Duke Community Standard:** I will not lie, cheat, or steal in my academic endeavors; I will conduct myself responsibly in all my endeavors; and I will act if the Standard is compromised.

Course Schedule

Lecture	Date	Topic	Reading/Assignment (subject to change)
1	8/30	Introduction & Policy landscape <i>Guest Speaker:</i> Maggie Sasser Vice President of Government and External Affairs at Pine Gate Renewables	<ul style="list-style-type: none"> National Renewable Energy Laboratory (NREL): Facility-Scale Solar Photovoltaic Guidebook, Section 3 on PV System Components (pg. 8-17)
2	9/6	Solar Industry & Technology Overview, and Markets	<ul style="list-style-type: none"> Solar Energy Industries Association (SEIA) US ITC Fact Sheet The Inflation Reduction Act IRA and Solar Manufacturing Lawrence Berkeley National Laboratory (LBNL) 2021 RPS Annual Status Report (slide 4-12, 30-35) Reading Summary #1 Due
3	9/13	Public Policy & Regulatory <i>Guest Speaker:</i> Diane Cherry CEO, Diane Cherry Consulting <i>Instructor via Zoom, Speaker in person</i>	<ul style="list-style-type: none"> Developing Solar Energy in Rural Virginia: An Analysis of Legal, Environmental, and Policy Issues Reading Summary #2 Due
4	9/20	Market Selection, Siting & Land Control	<ul style="list-style-type: none"> Broker's Guide: How to Find a Suitable Solar Site Klavens Law Group: Know Your Title - Managing Real Estate Title Risks in Project Development Realtors Land Institute: The Top Three Real Estate Title Issues Realtors Need to Know Solar Energy Industries Association (SEIA): Guide to Land Leases for Solar Sample Ground Lease Agreement (<i>reference only – will be used in class</i>) Reading Summary #3 Due
5	9/27	Due Diligence, Interconnection & Project Engineering <i>Guest Speaker:</i> Daniel Copple Director of Technical Services, Leyline Renewable Capital <i>Duke MEM</i>	<ul style="list-style-type: none"> Sandia National Laboratories: Utility-Scale Photovoltaic Procedures and Interconnection Requirements (pages 18-26) FERC: The Federal Energy Regulatory Commission's Open Access Rule Reading Summary #4 Due
6	10/4	Land Use Permitting <i>Guest Speaker:</i> April Montgomery Chief Development Officer - EIP Storage	<ul style="list-style-type: none"> Town of Farmville Solar Overlay District A Battle is Raging Over the Largest Solar Farm East of the Rockies - NPR Concerned Citizens of Spotsylvania Website

			<ul style="list-style-type: none"> ● Assignment #1 Due @ 11:59pm the day before class
7	10/11	Financial Modeling and Project Finance <i>Guest Speaker:</i> Rory Huntly Vice-President, Finance and M&A, TED Renewables	<ul style="list-style-type: none"> ● The Impact of Financial Structure on the Cost of Solar Energy - NREL (pages 4-10) ● VA DEQ Settles with Essex Solar ● Essex Solar WTVR Article ● Akin Gump: A Legal and Commercial Checklist for Bankable Solar EPC Contracts ● No reading Summary ● Assignment #2 Due @ 11:59pm the day before class
8	10/18	Community Solar & PPAs/Offtake <i>Guest Speaker:</i> Laurel Passera, Senior Policy Director, CCSA - Coalition for Community Solar Access <i>ZOOM Class Only - in person not required</i>	<ul style="list-style-type: none"> ● Environmental Protection Agency (EPA): Solar Power Purchase Agreements ● Overseas Private Investment Corporation (OPIC): Important Features of Bankable Power Purchase Agreements for Renewable Energy Power Projects ● Reading Summary #5 Due
9	10/25	Project Management & EPC <i>Guest Speakers:</i> Class Alumni Panel	<ul style="list-style-type: none"> ● Come up with 2 questions ready to ask alumni working in the industry ● Assignment #3 Due @ 11:59pm the day before class
10	11/1	Developer Perspective: Current Trends & Market Dynamics <i>Guest Speaker:</i> TBD	<ul style="list-style-type: none"> ● Solar Industry Association Solar Market Insight ● Reading Summary #6 Due
	11/8	Class Traded for Energy Week Participation	<ul style="list-style-type: none"> ● Energy Conference attendance is encouraged
11	11/15	Energy Storage & Other Technologies <i>Guest Speaker:</i> Edward May Co-Founder & Managing Partner Energy Intelligence Partners <i>Fuqua MBA</i>	<ul style="list-style-type: none"> ● U.S. Energy Storage Monitor, Executive Summary, Q4 2020 - Wood Mackenzie ● Final Presentation Due @ 11:59pm the day before class
12	11/29	Final Projects Presentations
